Letter of Recommendation for Student

I strongly support Student's application to your program.

Student was a student in three of my courses:

1. Mathematics for Infants: a basic course on counting.
2. Discrete Mathematics I: an advanced course on counting.
3. Discrete Mathematics II: the revenge of Discrete Mathematics I.

In every class Student was the quintessential "A" student, turning in excellent work at all times. Her assignments were among the first I would grade.

After working with her closely, I have personally witnessed these strengths in Student time and time again:

- Student's mathematical preparation is excellent. She has a strong grasp of mathematical ideas.
- Student can communicate mathematics lucidly. I have seen explain mathematical ideas to peers with ease.
- It is obvious that Student takes her career and studies seriously. She takes direction well.

Please give Student's application serious attention. She certainly has my wholehearted recommendation. Please contact me at aamendes@calpoly.edu for further information.

Sincerely,

Anthony Mendes
Professor
