Dear Hiring Manager,

I am applying for the position of Musical Bubble Engineer. I have over a decade of experience with both rhythm and composition on piano and drum set. I also have a coding background in C and Python which has allowed me to gain competence writing rigorous code, and thorough tests.

As every bubble engineer knows, linear algebra is the bread and butter of bubble design and simulation. I will be taking my third course in linear algebra this spring and intend to continue my pursuit to learn more about operators long after the quarter's end.

I look forward to discussing the position further with you in person. References are available upon request.

Thank you for your time and consideration.

Sincerely,

Cameron Fredrickson
